

EXTERNAL COST CALCULATOR

TRANSLATING THE EXTERNAL COST OF TRANSPORT

The real cost of transport goes beyond the immediate internal costs related to transport and mobility operations. The External Cost Calculator (ECC) translates these externalities of transport to society into monetary terms, the so-called external costs of transport. The ECC is based on the most up-to-date methods and metrics.

EXTERNAL COSTS OF TRANSPORT

- Congestion
- Accidents
- Noise
- Air pollution
- Climate change
- Loss of space
- Infrastructure damage

WHAT YOU GET

The External Cost Calculator enables your company to calculate external costs based on ready-to-use or self-developed input values using different techniques.
